Scan for portfolio

Brief

Full-stack developer with 3+ years building and shipping production web applications. I work across the full stack — crafting interfaces with React and Next.js, building backends with Python and PHP, and designing databases with PostgreSQL and vector stores. Recently, I've been extending that foundation into AI: integrating LLMs, building RAG pipelines, and wiring agentic workflows that automate real business processes.

Experience

Fullstack AI Developer

Self Employed
2024 – Present

- Built AI agentic workflows connecting LLMs with external tools, APIs, and data sources for task automation.
- Developed and deployed RAG-based chatbot systems with multilingual support and custom knowledge retrieval.
- Designed REST APIs bridging frontend interfaces with AI backends and third-party service integrations.

Backend Developer

Arifget.com
2024 – 2025

- Built and maintained notification infrastructure features using Laravel and Redis within a cross-functional team.
- Collaborated with fellow backend engineers on API improvements, reliability, and codebase quality.

Full-Stack Developer

INSA
2023 – 2025

- Built a conference management portal using Laravel 11 and React for scheduling and attendee registration.
- Contributed across feature development, performance fixes, and platform infrastructure.

Projects

Bilicta AI
